End User Guide for JPS Calculator Application

Contents

Chapter 1. SumUp

Chapter 2. Subtract

What is the Subtraction of Numbers

Here you learn what is subtraction.

And now what I want to do is to add some supporting concept information.

I would like to put it somewhere here close to the subtract functionality to make it clear what this concept is related to, but my first step is to simply create this topic.

and I am going to file new. And in the list of file templates, I enter concept. What I want to use is a concept DITA topic type, so I select this one and now I have to enter the title for my conceptual type of topic, I will simply use a copy paste.

How To Subtract Using JPS Calculator

Here you will find instructions on making subtraction on JPS calculator.

To successfully subtract numbers, you must know what is subtraction.

1. Enter the first number.
2. Choose the minus (-) button.
3. Enter the second number.
4. Choose the equal button.

The results from the calculation is displayed.

Example:

You want to subtract 2 from 3.The equation will look like : 3-2=1. Enter 3. Press minus(-). Enter 2. Press equals(=).

The answer will appear on the screen.

Chapter 3. Multiply

Chapter 4. Divide
